

Ideal for Historical buildings Firepro systems can be installed with minimal disruption to the building structure, and can be mounted in ways which are sympathetic to the surroundings while still providing effective fire protection in accordance with Australian regulations.

Ozone Friendly - Cost Effective - Gas System Alternative. **FirePro** is an exciting new development in fire Protection. It uses no high pressure cylinders, no pipework, does not require expensive maintenance procedures and is suitable for all types of risk. FirePro has been evaluated and verified as conforming with the requirements of AS 4487-2013 Condensed Aerosol fire Extinguishing Systems.

### FirePro® main characteristics:

- **Autonomous and Automatic** - there is no need of external electrical or pressure supply but compatible to any conventional alarm / detection system.
- **Space and weight saving.**
- **Activated electrically or thermally.** Suitable for A, B, E class fires.
- **Subject to negligible maintenance** costs compared to other pressurised systems.
- **Its built-in fail-safe activation system** ensures operation of the generators when required, even if everything else fails.
- **The solid compound** does not contain pyrotechnic materials and it is stable to temperature fluctuations and has a long operation life-time.

**METHOD OF FIRE FIGHTING** - All **FirePro** Fire Extinguishing Aerosol Generators use the latest generation of the stable SBK aerosol forming solid compound. On activation the compound is transformed into a rapidly expanding, highly efficient and highly effective fire extinguishing aerosol, based on Potassium salts.

Kykkos Monastery, Church Cyprus

### Installations Include:

#### CYPRUS

Kykkos Monastery Church & Museum  
Strovolos Cultural Center Museum
